Consulting Services

JARRAH IS HERE TO HELP CUSTOMERS MANAGE THE CHANGE THEY WANT TO SEE IN THEIR POWER SYSTEM

Change in a power system environment is difficult and there are many competing demands. Jarrah Solutions is here to help customers make improvements to their power system. This can take many forms, for example improved documentation, standardization of processes, improved safety design, reduced cost, improved reliability or faster delivery.

Implementation of new technology or process improvements will likely lead to real or perceived increases to the risk profile. Jarrah Solutions can help customers manage these risks to ensure safe and reliable delivery.

Capital Expenditure

POWER SYSTEMS EXPANSION AND ASSET REPLACEMENT

Jarrah Solutions can help with the efficient connection of large electrical loads, complex generators or new substations.

Jarrah Solutions can help with replacing aging power systems assets and upgrades to protection, automation and SCADA systems.

Operating Expenditure

KEEPING THE NETWORK UP AND RUNNING

When have you ever met a customer that doesn't care about their power? Keeping a power system running efficiently requires an intelligent approach to maintenance and operations. Jarrah Solutions can help with developing optimised maintenance strategies, innovation in maintenance and operations, and also the day-to-day aspects such as developing contingency plans and performing fault investigations.
